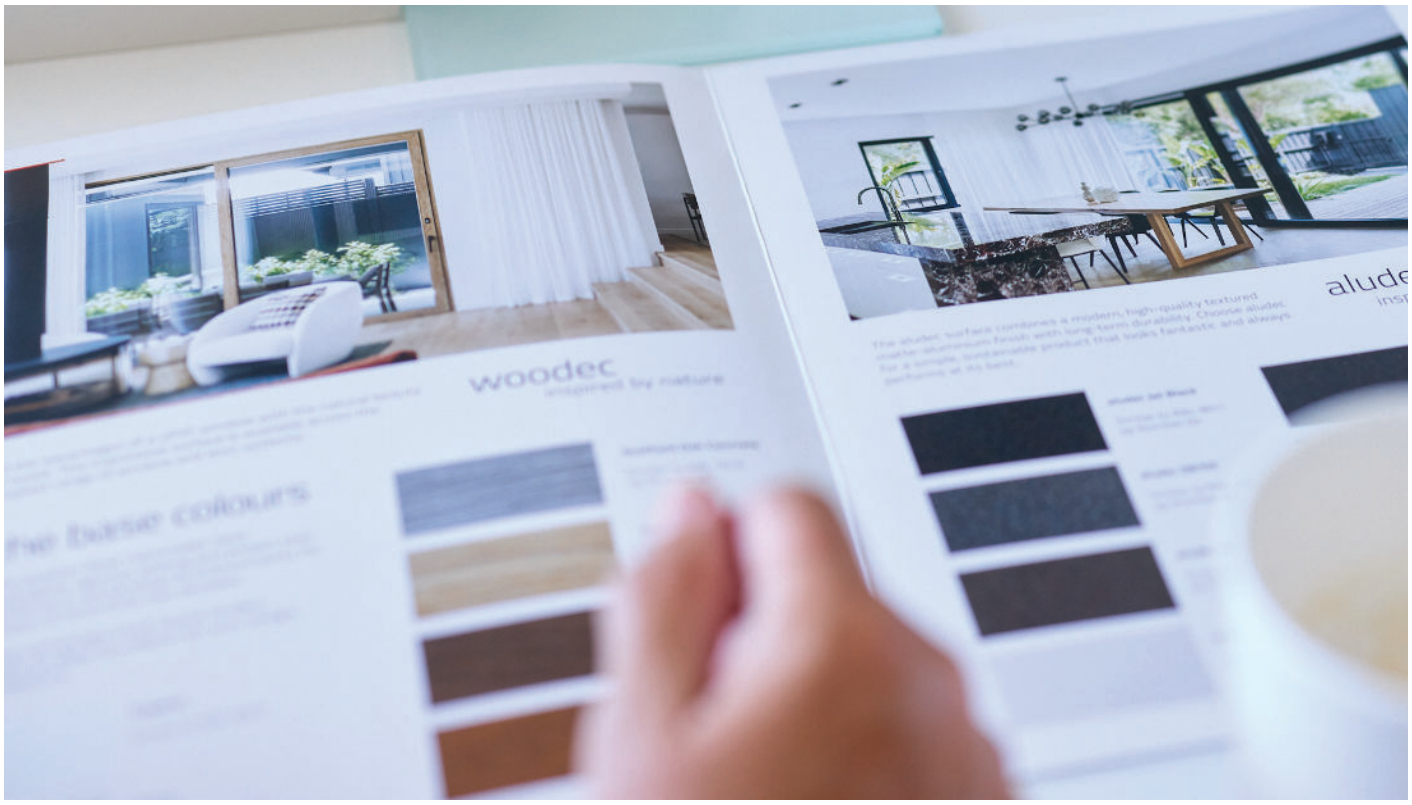
UPVC WINDOW FRAME COLOURS AUSTRALIA

PREMIER
WINDOWS & DOORS



HIGH PERFORMING WINDOW AND DOOR FRAMES

Premier Windows exclusively supplies aluplast profiles featuring Continental's Cool Colours, a coating engineered for superior durability, energy efficiency, and visual appeal in extreme climates.

WHY SURFACE TECHNOLOGY MATTERS

Traditional uPVC profiles absorb heat, causing warping, fading, and performance degradation. aluplast, in partnership with Continental, integrates advanced surface films that combat thermal stress and UV impact.

CONTINUAL TESTING IN AUSTRALIA

Aluplast's films are put through their paces at the renowned Allunga Exposure Laboratory in Townsville, Queensland.

This site is internationally recognised for its extreme UV exposure and intense tropical weather, making it one of the most demanding real-world environments for outdoor product testing.

Here, window profiles and film samples are mounted on large racks and exposed to relentless sunlight, high temperatures, humidity, and monsoonal rain-conditions that truly reflect Australian weather conditions.
